FORCE Outboards

service bulletin

No. 92-5

Expanded Propeller Selection

1992 models of the 90/120/150 HP Force Outboard motors have a new gear housing which can use the same propeller selection as the 75/115 HP Mercury/Mariner Outboard motors. It is important to note that when one of these propellers is used, a thrust spacer washer (P/N 23-819057) must be installed.

Also, before installation of a Laser II or a High Five propeller, a special exhaust snout (P/N F44116) must be installed.

We are pleased to make this announcement to you since this adds to the versatility and performance of the Force Outboards for your customers.
