A. ANODE MATERIAL CHANGE

Models

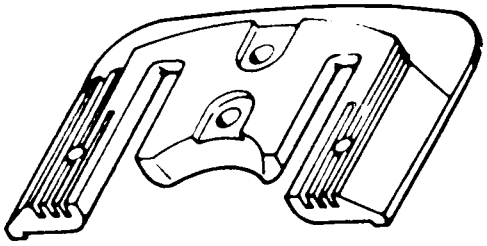

Alpha One/Alpha One Generation II and Bravo One and Two drives.

Change

The material in the anodes is changed from ZINC to ALUMINUM ALLOY to provide increased corrosion protection in fresh and salt water. These anode assemblies will supersede all zinc anodes being used today, on Alpha One/Alpha One Generation II and Bravo drive units. The anode trim tab will supersede at a later date.

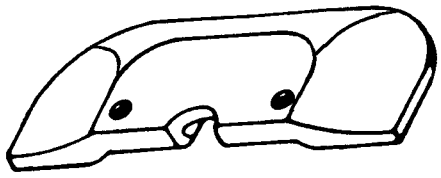

Supersession when ordering from Quicksilver service stock.

815933A1 will supersede to 821629A1
817373A1 will supersede to 821630A1
43994A2 will supersede to 821631A1
