No. 91-4

EFI Cold Start Enrichment Circuit

MODELS

1991 2.5 EFI/2.5 EFI Offshore

CHANGES

All 1991 Hi-Performance EFI models have been rewired so the cold start enrichment circuit must be operated manually. Pushing in on the key switch (normal manual choke operation) will activate the enrichment circuit for cold starting. This change was made for easier starting when the engine is warmed up to operating temperatures.

Please instruct your customers on the operation of this system.
