Hi-Performance MARINER OUTBOARDS

MERCURY PERFORMANCE OUTBOARDS

# service bulletin

No. 95-4

## External Maintenance Procedures for Hi-Performance Polished Gear Cases

Before submerging a polished gear case in the water, it is recommended that a coat of quality wax like Quicksilver Marine Paste Wax (67-829939) be applied to the polished surface.

To return your gear case to its original luster, apply Quicksilver Marine Aluminum Restorer & Polish (67-829933) or One Step Metal Restorer and Polish (67-829931). A Quicksilver Superbuff Pad (67-829945) and electric drill motor can be used to help reduce cleaning time. After polishing, apply a coat of Quicksilver Marine Paste Wax for added corrosion protection.
